WEINIG EUROSTACKER

NEW!

Stacking made simple.

EuroStacker with safety system Safety Plus

Become more efficient in your workflow while preserving full flexibility. Safeguard and promote your employees' health.

Capacity requirements for cutting fixed lengths are growing – what goes in at the front of the saw has to be taken out at the back. When cutting packages, a single package can easily weigh between 15 and 20 kg – or even more with high wood moisture content.

WEINIG's answer to this is the new semi-automatic EuroStacker stacking aid.

With a manageable investment, you can have packages stacked semi-automatically. Provided that your WEINIG OptiCut has a conveyor belt with a pusher. With the WEINIG EuroStacker, the operator only has to position the stacking sticks for each new layer and lower the pallet truck to the next position by pressing a button. All further stacking steps are automatic, leaving you more time for other activities during production. Once the pallet of the electric pallet truck has been filled, the full stack can be transported to the next storage or production location.

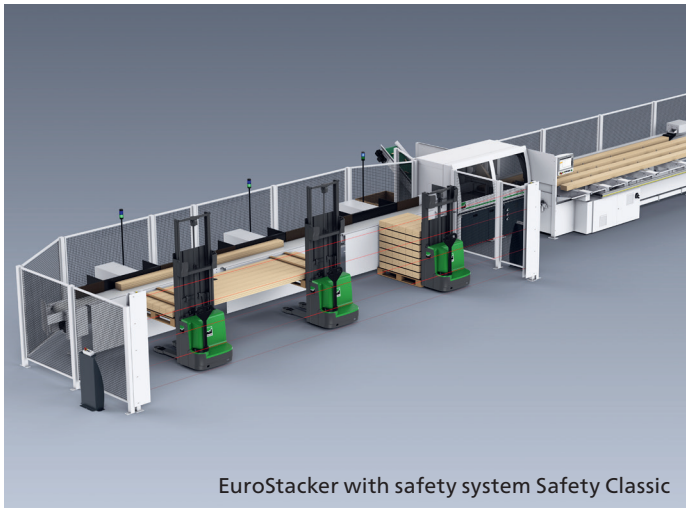

The pallet truck can then be used for other activities or returned to the system for stacking.

The advantages of the WEINIG EuroStacker

- No more laborious, manual stacking of heavy board packages
- Increased efficiency of the entire system
- Improved allocation of manpower
- Affordable entry into automatic stacking
- Flexible sorting
- Flexible use of the electric pallet truck also outside the system

The EuroStacker increases your flexibility in conventional sorting.

Turn your cross-cut saw into a flexible cross-cut system with the new WEINIG EuroStacker.

Subject to technical alterations. Statements and pictures in this brochure may contain items that are not included in the standard scope of supply. Some protective covers were removed for photographing.
